

Individual reflection

Week 5

What do I want to learn or understand better?

I want to better understand how buttons work in html and JavaScript, since it proved to be an issue in this week's sprint. I also want to learn more about bootstrap and how to use their stuff since I found it somewhat difficult to understand their documentation.

How can I help someone else or the entire team to learn something new?

I can share my knowledge on any subject someone might have questions about.

What is my contribution towards the team's use of Scrum?

I've participated in all sprint plannings. I have been a part of completing the user stories, writing tasks, giving them acceptance criterias and then estimating the tasks and user stories.

What is my contribution towards the team's deliveries?

I made a function for sorting the pubs. The function takes an argument and sort based on that, either by alphabetical order or by queue length order. I also added radio buttons that when clicked, is supposed to call the function for sorting.
