

- I want to learn how to be more efficient with the different functions of Github. I believe that I have a very basic knowledge of Github and I can use a lot of things without problems. However, managing a pull request and creating a code review has proved to be a little trickier than it sounds. My goal is to be able to handle the essential tools of Github so that I can take my finished code from my coding platform and put on the repository for others to use. There are benefits with being efficient on Github, for instance, I can return to working with other tasks in our project or I can spend more time on Trello and work on the Scrum. My plan is to try to use the many tools of Github as much as possible. For this sprint me and my team member who worked together both agreed on creating a pull request and reviewing each others code. However, my team member had some problems with keeping track on her branches and the master branch so I ended up not doing an official code review. On the other hand I did look through her code and wrote a comment on her branch but since I did not have enough information of the function of Git I missed the boxes where you could do a code review. If I get another opportunity I will do an official code review and I have been looking through Github's webpage and read the instructions there. In addition, I will discuss this with my team on our next meeting and see if any others are interested in working entirely with branches and doing code reviews. At the moment, the group has decided that we want to focus on the tasks on our scrumboard and the finished product. Therefore, Github is not a priority for the group but perhaps for the final weeks we can try to work more with it in order for us to learn and gain new experience.
- This week I worked with Antonia on a combined task and we worked together on other tasks on a previous sprint. I have a little more experience with Github and IntelliJ so those were the things I could help with the most. I personally wanted to help my team members with code reviews and branches on Github and so I discussed it with them during our meetings. Because Antonia and I worked together we managed to be very active on Github and I helped her with navigation and explaining the different tools. I want everyone to feel comfortable to try it out and I think it would be a good experience for all in the group to try it out and it would be beneficial for future projects. My plan is to take a couple of minutes next week during our meeting and help any of my members who have not so good knowledge of the Github tools. If what I tell them during the meeting is not enough then I will help any who want via messages or have a Zoom meeting. By doing this everyone will have a good understanding of what to do and then they can work with Github's tools on their own.
- For this week I have been very active on Trello where we have our scrumboard and I have thought a lot of how to work in an agile way. I want to continue working simultaneously with our board on Trello. What I mean by this is that I want to work on my individual tasks but also keep an eye on Trello from time to time so that I am aware of my team members progress as well as informing them of my own progress. In addition, I want to be more active during our meetings and discuss the agile parts just to make sure that my team members are on the same page. I believe this is important because it strengthens the collaboration within the team and we also improve our communication. In order for me to get there I have to plan my own schedule better and also think about what I have to prioritize. For example, if I finish my tasks before the others and I see that my team members have not moved their cards in Trello I will have to go back to our board and check it later. Perhaps before I go to bed, I look at the board and see my team members current progress. Then the next day if we have a meeting I will be more prepared and I know exactly what others have been doing so then I can be more efficient when discussing during the meeting. So by better scheduling my work for the week and planning time that has to be spent on Trello or the Github repository, then I will improve my understanding and efficiency. In addition, I believe that doing this

process will make me comprehend Scrum even more and I can work better with the agile parts.

- This sprint I had several tasks to work on and it was important to get them done. I collaborated with my team member on the combined task where we created the search function for our website. Just like our first collaboration we used Zoom and the screensharing tool to work together and help each other. And in the end, my team member Antonia pushed the finished code onto Github. In addition, I worked on the Header and Footer of our website and added several new adjustments so that it is closer to being finished. I can add that I took a few liberties with adding content that I personally saw fit. For example, in the footer there are links to Chalmers policy on alcohol as well as to the Swedish government laws, I thought this would be good considering the fact that the Pub Crawl handles a lot of alcohol. Furthermore, I worked with Johan, Ludvig and Jesper on getting the queue length function integrated with the rest of the project. As I wrote before I have been very active on Trello and so that helped me with completing my tasks. My plan is to continue being active on the scrumboard so that I can make sure that my deliveries every week are satisfactory and that they follow the acceptance criteria. I have to be very clear in my own planning and make a well structured schedule for the sprint week.
