

Individual reflection week 7

What do I want to learn or understand better?

Last week, I yet again wrote about code reviewing. After having our sprint planning meeting on Monday, we realized that the benefits of starting to code review a lot more were quite small in the last sprint, since most of the user stories that we chose to work on was more about fixing smaller stuff, making sure that everything looks nice and basically just tie everything together. Although that is, in a way, a form of reviewing each other's code.

Reflecting on the goals in the beginning, I feel like I now know a lot of the basics of implementing a website, and I feel more comfortable in looking up stuff and implementing them in my own code. I also feel like I have learned a lot about working in an agile way and scrum. At the same time, I feel like there is still much to learn, and I would like to understand more. I guess the way is simply to work in teams and continuing to be open minded and learning.

If we would have had another sprint, I would have liked to learn how to better structure our code. Learning design patterns and doing things a more proper way rather than being happy that something works. To get there, I think that the internet would be the best bet, google and watching videos on how to do things properly.

How can I help someone else, or the entire team, to learn something new?

I have continued to ask for help whenever I have needed it, for my own sake but also in hopes of someone else learning something on the way. We have also had a lot of discussions, about what we would like to implement, what could be changed etc.

What is my contribution towards the team's use of Scrum?

The same as in every week, participating in every meeting, actively trying to use our scrum board and other agile practices. Trying to stay conscious of what is considered agile practices and what are not.

What is my contribution towards the team's deliveries?

I have done my user stories, working on fixing all smaller things on the website as well as some layout stuff. Fixed some borders, some name inconsistencies etc. I have also been active during all of our meetings, discussing issues and to dos.
