

Individual reflection

Week 7

What do I want to learn or understand better?

I have learned a lot about HTML and JavaScript during this project. This project was done during such a short time that it was hard to really get into these two languages that are new to me. That is why I still want to learn more about them both and understand them better to have an easier time working with them in the future.

How can I help someone else or the entire team to learn something new?

Since our group was made up of students from two different programs, we all had different knowledge brought with us. I think we all used it well to make the other members of the team learn something new. I also think past knowledge and experiences are the biggest assets when it comes to help someone else learn something new.

What is my contribution towards the team's use of Scrum?

This week I was scrum master together with Emma. Since we as a group have not decided on a lot of responsibilities for the scrum masters, it did not feel much different from the other sprint. It is probably easier to get into and understand the role if you are scrum master for more than one week.

What is my contribution towards the team's deliveries?

This week I wrote the script for the oral presentation. I also planned the order of the presentation; this was done together with Thomas. It was also decided that the two of us will do the presentation while the rest of the group takes part at the end if the viewers have questions. I have previous weeks taken part in writing the team reflections and sprint retrospectives although forgotten to mention it.
