Individual Reflection, Antonia Welzel

What do I want to learn or understand better?

I have improved my coding skills and learned more about JavaScript and HTML. I think I will get better in the coming weeks with more experience. I also want to have a better understanding of what creates value for our stakeholder, especially in terms of the website's design and appearance. I have read more about different design patterns, but will have to find out how they relate to value creation.

How can I help someone else, or the entire team, to learn something new?

I tried to help the group as Scrum master and to improve the group's routines.

What is my contribution towards the team's use of Scrum?

I was Scrum master this week. We have already used Scrum for a few weeks, so the team was already familiar with it and as Scrum master, I was therefore more focused on reviewing our current methods and how they relate to Scrum, as well as ensuring that we keep working with the Scrum techniques we had already implemented.

What is my contribution towards the team's deliveries?

I finished the tasks I was assigned this week, where on one of them I also worked together with another group member. I contributed to writing the team reflection and the sprint retrospective.
