Individual Reflection week 7

What do I want to learn or understand better?
I feel that over the time of the course have learned a lot on agile practices. I think it is a very interesting and effective way of working. In the future I would like to improve on how to combine software and hardware development. I want to continue learning agile practices through continues agile projects.

How can I help someone else or the entire team to learn something new?
I have previously worked with agile software development and Scrum during my summer jobs at Volvo Cars R&D department for Comfort Functions. Therefore, I am somewhat familiar to the process and that's one area where I can help the team.

What is my contribution towards the team's use of Scrum?
I have as usual been participating on all team meetings and making sure that we stick to the purpose of the meetings and the agenda.

What is my contribution towards the team's deliveries?
Jesper and I have been working with making the site consistent since this was the last week of the project.
